Subj: TMI Salt Pure® Letter of Reference

We are a large health and athletic facility located in Massachusetts with an approximate 5 acre foot print. Within the confines of this foot print we have a small water park and two indoor pools. Both of these indoor pools are on TMI Salt Pure® Systems.

We decided to install our first system in January of 2008 after research and feedback from other salt water pool operators informed us of how much better their members loved the comfort factor they were experiencing in these pools. After meeting with Timothy at a trade show we decided to purchase his equipment. Our installation was accomplished "in house" using detailed instructions and diagrams provided by TMI Salt Pure®. TMI followed our installation closely providing whatever support was needed helping the whole process proceed smoothly. At system start up, TMI support staff provided excellent tech support monitoring our system daily for about two weeks to insure that all systems were working properly before turning complete control over to us.

The response from our swimmer population was immediately favorable with positive comments on how wonderful the water felt and how much better the whole pool enclosure environment was. Based on our experience with this pool we decided to install our second system in October of 2009.

Most recently, to further enhance our pool water and overall bather experience; we installed the TMI UV system, Salt Synergy, to both of these pools. The water quality and clarity further improved along with a significant improvement in air quality. I have been having troubles with the environmental units for my adult pool and even with these issues, the air quality in that pool dramatically improved. As an added bonus, because UV "kills chloramines", the need to shock has virtually gone away saving us chemical cost and pool down time.

I can only describe my experience working with the TMI support staff as enjoyable. They are extremely well knowledged in all aspects of pool operation, very responsive, and professional. A positive experience and a good business decision for our facility.

Sincerely
