

The Women's Club is a women's only gym located in Missoula, MT. The Women's Club, founded in 1983, has been improving women's health in the community for nearly 36 years. We recently sat down with Camie Evans, General Manager of TWC, to ask her to talk about the role TMI plays in their daily operation of the pool and spa.

A Little About Camie

Camie Evans has been in the health club industry for 38 years with 36 of those at The Women's Club. Having started as an "aerobics" instructor, she quickly moved into physical plant management, marketing, bookkeeping and finally club management. She is grateful for the maintenance team on site, now, and the ability for them to work with TMI.

Camie Evans

Why did you elect to choose TMI?

I chose to go with TMI because other members of the health club association I belong to, like Timberhill, Sunset and many others were using TMI systems. Now we have the only commercial saltwater pool and spa in Missoula.

Do you like the results of the TMI system now?

The start up was more challenging and cumbersome than I would've liked but now that it's dialed in, it's working well. The thing that makes me the happiest is the UV system, It's awesome. In terms of results, our members absolutely love the saltwater. People flock here for that. Our classes are full, we have a great aquatics program and we have about 25 classes at week. It's actually one of our bottlenecks right now because it's so popular.

How has the addition of TMI enhanced your business?

While membership has fluctuated over the years, the aquatics classes have been steady in attendance. Members and staff love the addition of the UV, added last fall. The TMI combination of Control + Salt + UV is a winning solution. The water is clearer than it's ever been and we get compliments on our water and air quality.

TMI has a different business model, we support remotely, what do you think of our model vs traditional servicing?

We've never had outside service companies. We have always had a maintenance person, CPO® onsite. So, it actually works well with your model.

What would you tell others looking for salt systems and UV?

I recommend people do their research, lots of research. I would recommend a site visit to see how it all works. TMI is very responsive to questions, so you can ask a lot.

Would you recommend TMI to other facilities?

No one has asked but yeah, yes, I would recommend TMI.

Anything else to add?

The UV has worked out well. The TMI equipment (Chemistry Controller, UV, Salt System) combination is working well. Our members love it. Since adding the UV to our system, our chemical expenditure is half of what it was in the first four months of last year. I was amazed, that's great! I recommend all three pieces working together.
