

Saskatchewan is Canada's "sunniest" province, averaging 2,000 to 2,500 hours of sunshine annually. The province has a population of just over 1.1 million, with Regina, the capital city, counting roughly 240,000 and Saskatoon, the largest city, having a population of 300,000. The City of Saskatoon, also called the "City of Bridges", is split by the Saskatchewan River connected by a series of bridges.

The University of Saskatchewan in Saskatoon is one of the top research-intensive, medical doctoral universities in Canada, and is home to world-leading research in areas of global importance, such as water and food security and infectious diseases. The university, founded in 1907, is multi-disciplinary and is known as one of the top 15 universities in the country.

The university has two pools, both were built in the mid-60's, with one initially for recreation and the other for varsity sport. Over the years both became recreational pools and became central to the community outreach on campus. At this point, the two pools service the 32,000 students as well as the Saskatoon community, offering a great wet experience.

We sat down with Roger Moskaluke, Facilities Manager for the last 20 years, to chat about our 10-year relationship. Roger pointed out that in the beginning, they were using gas chlorine, and it was a struggle to maintain good water quality. Along the way, changes had to be made to meet regulations and this gave them the opportunity to consider other options. They went with a multi cell salt system which was semi successful, but caused some maintenance grief, with super chlorination required every two weeks. In 2014, they explored adding UV systems to improve water quality and that turned out to be very successful. The TMI UV proposal was very detailed and outlined exactly what they were looking for. ***"The numbers were spot on, and the system did exactly what TMI promised it would which impressed us."***

"Over the last 10 years, TMI has earned a strong level of trust here at the University because you stood behind your promises and have worked with us every step of the way. Usually, once the equipment is sold, we never see the supplier again. TMI is one phone call away and one solution away. The UV systems are still operating as they should and now, we need to take a good look at our filtration system. We're not getting great clarity from our filters and having to do too many backwashes. We'll be exploring our options with TMI."

"TMI would be my first recommendation to any counterpart of mine. The money we spent on the TMI UV systems was the best money we've spent in the last 20 years. TMI came through with everything they promised, I'd call TMI any day, any time."
